A template engine enables you to use static template files in your application. At runtime, the template engine replaces variables in a template file with actual values, and transforms the template into an HTML file sent to the client. This approach makes it easier to design an HTML page.

Templating Engines

Available Templating Engines

EJS	Pug (Jade)	Handlebars
`<p><%= name %></p>`	`p #{name}`	`<p>{{ name }}</p>`
Use normal HTML and plain JavaScript in your templates	Use minimal HTML and custom template language	Use normal HTML and custom template language
